Children GMFCS Levels

Adults GMFCS Levels

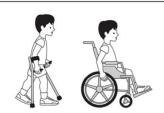

GMFCS Level I

Children walk indoors and outdoors and climb stairs without limitation. Children perform gross motor skills including running and jumping, but speed, balance and co-ordination are impaired.

GMFCS Level II

Children walk indoors and outdoors and climb stairs holding onto a railing but experience limitations walking on uneven surfaces and inclines and walking in crowds or confined spaces.

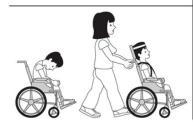

GMFCS Level III

Children walk indoors or outdoors on a level surface with an assistive mobility device. Children may climb stairs holding onto a railing. Children may propel a wheelchair manually or are transported when traveling for long distances or outdoors on uneven terrain.

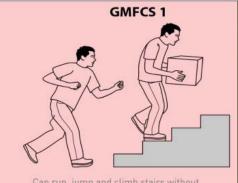

GMFCS Level IV

Children may continue to walk for short distances on a walker or rely more on wheeled mobility at home and school and in the community.

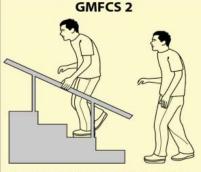

GMFCS Level V

Physical impairment restricts voluntary control of movement and the ability to maintain antigravity head and trunk postures. All areas of motor function are limited. Children have no means of independent mobility and are transported.

Can run, jump and climb stairs without issue, but speed, balance or co-ordination are impaired.

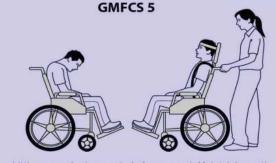

Can walk and climb stairs using a rail but issues with walking on uneven or inclined surfaces or walking in crowds or confined spaces.

Can walk on level surfaces with assistive device but a manual wheel chair used most of the time

Capable of walking with a walking frame but mostly relies on wheeled mobilty at home and when out.

Little or no voluntary control of movement. Maintaining antigravity head and trunk postures difficult. All areas of motor function limited. Usually needs to be transported.

GMFCS Gross Motor Function Classification Scale

This scale was originally designed to classify children with cerebral palsy according to their gross motor function.

The Society has extrapolated this scale beyond children so that information gathered in our research, 'CP through the Life Span', will allow our members to relate the research data for people in a similar GMFCS group to themselves.
